

Plant growth regulator according to YA 217217/2004

Increases the absorption of nutrients and combats abiotic stress

Description:

STATUS is the **only official bioactivator patented and approved in Europe with CE** that combines the agent MTU and pidolic acid and contributes to the increase of chlorophyll.

STATUS contains 2 g/l MTU (1-(2-methoxyethyl)-3-(1,2,3-thiadiazol-5-yl)urea) & 320 g/l pidolic acid.

The MTU factor stimulates photosystem I, increasing the concentration of chlorophyll and other pigments in the chloroplasts. This improves resistance to abiotic stress, green leaf retention and biosynthesis of digestible elements.

Pidolic acid enhances nitrogen assimilation.

This combination enhances the efficiency and quality of production.

Instructions for use:

Status is applied foliarly with a general dosage of 0.2-0.25 lt/10 acres, up to 2 applications.

Suitable for all crops: Vegetables, Leafy vegetables, Sea anemone, Stone fruits, Eggplants, Citrus fruits, Cereals, Rape, Maize, Grass.

Time of application:

At the stage of plant growth and at fruit set.

VOLUME OF WATER:

100-300 liters of water per acre.

Compatibility:

Follow the instructions for mixing the crop protection product. Status must always be added to the spray can First.

STORAGE AND DISPOSAL CONDITIONS:

Keep locked up, out of reach of children.

Dispose of contents and container in accordance with national waste disposal legislation.

Store away from sunlight in a cool and dry place.

It's not a plant protection product

NitroFarm SA is certified with EN ISO 9001:2015 Quality Management System and EN ISO 14001:2015 Environmental Management System
